(54) Title: TWIN COAXIAL CATHETERS FOR RF PULMONARY VEIN ABLATION

(57) Abstract: A catheter system includes an outer catheter having a lumen and an inner catheter sized to fit within and slide through the lumen of the catheter. Both catheters may be introduced into an anatomical site through a single introduction path. At the distal-end region of each catheter is an electrode system. One electrode system is for mapping the site; the other is for ablating the site. The distal-end regions of one or both of the catheters may be linear shaped, circular shaped, or radially expandable. When the catheter system is deployed the electrode systems carried by the distal-end regions of the mapping catheter and the ablation catheter are movable relative to each other and tend to lie in planes substantially parallel to each other. Another catheter system includes two separate electrode systems on a single expandable member shaped so that both electrode systems come in contact with separate sites.

INTERNATIONAL SEARCH REPORT

Box I Observations where certain claims were found unsearchable (Continuation of item 1 of first sheet)
This international Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:
1. X Claims Nos.: 33-49, 60 because they relate to subject matter not required to be searched by this Authority, namely:
Rule 39.1(iv) PCT - Method for treatment of the human or animal body by surgery
Claims Nos.: because they relate to paris of the International Application that do not comply with the prescribed requirements to such an extent that no meaningful International Search can be carried out, specifically:
Claims Nos.: because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).
Box II Observations where unity of invention is lacking (Continuation of item 2 of first sheet)
This international Searching Authority found multiple inventions in this international application, as follows:
As all required additional search fees were timely paid by the applicant, this international Search Report covers all searchable claims.
2. As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment of any additional fee.
As only some of the required additional search fees were timely paid by the applicant, this international Search Report covers only those claims for which fees were paid, specifically claims Nos.:
4. No required additional search fees were timely paid by the applicant. Consequently, this international Search Report is restricted to the invention first mentioned in the claims; it is covered by claims Nos.: 1-3, 19, 26, 27
Remark on Protest The additional search fees were accompanied by the applicant's protest.
No protest accompanied the payment of additional search fees.

Form PCT/ISA/210 (continuation of first sheet (1)) (July 1998)

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 219

This International Searching Authority found multiple (groups of) inventions in this international application, as follows:

1. Claims: 1-3;19,26,27

system comprising two catheters, one sliding within the other, each having an electrode system

2. Claims: 1,4,9;19,20-25,28-31

a catheter system consisting of one outer and one inner catheter wherein a "tendon" (pull wire) bends the distal end of the outer catheter

3. Claims: 1, 5-8,10-13

a catheter system consisting of one outer and one inner catheter wherein the outer catheter has a preshaped curve

4. Claims: 1,14-16,

a catheter system consisting of one outer and one inner catheter wherein the inner member has outwardly bending segments at distal end

5. Claims: 1,17,18;19,32

catheter system consisting of one outer and one inner catheter wherein a generator and a signal processor are used

6. Claims: 50-59

A catheter having a circuferentially expandable member with first and second electrode systems
